Dear Customers,

In the coming weeks, the town will be conducting sewer line repair work in your area. One aspect of the project will involve high pressure cleaning of the sewer main. This may cause a loss of water in sink, tub, floor drain traps. If you begin to notice a rotten egg smell or other malodor, simply run water in the tub, sink or floor drain to refill the trap. Sometimes the pressure cleaning can also cause water to splash out of the commode. You should notice workers in your area towards mid, March through April.

Please note that if you have buildings, plantings or other items within the sewer easement, they must be removed.

If you should experience any problems, please contact the utility office at 812-544-3329.

Sincerely,

Russ L. Luthy
Utilities Superintendent
Town of Santa Claus
